

NUVO® Speakers

A speaker for every space,
project and price point.

A speaker for every space, project and price point.

From a manufacturer with a deep-seated passion for music.

As a professional installer, you've got the experience and expertise to recommend the optimal sound system for your clients' many spaces, sound quality expectations and price points. We offer a choice of professional grade speakers that deliver exceptional sound quality and coverage to help you get the job done right.

Professional products for expert installers.

Nuvo Series Two, Four and Six wall and ceiling speakers are made for professionals like you whose reputation was built on installing only the highest quality products.

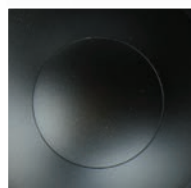

While each Series of speakers is manufactured with quality components and materials, there are unique differences in the internal components of each, including the resistors, inductors and capacitors that comprise the crossover network.

With each step up in the Series, the efficiency of the speakers increases by one to two decibels so listeners get more sound out of the Series Six compared to Series Two or Four. And, because the Series Two, Four and Six speakers are 8 ohm, any amplifier can drive them though they sound particularly crisp with high quality amplification like that used in Nuvo Player Portfolio multi-room audio products.

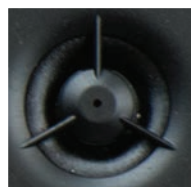

SERIES TWO

BALANCED

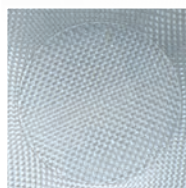

Series Two woofers are constructed with high-grade polymer for deep bass.

Series Two tweeters are made from silk for smoother highs.

SERIES FOUR

ENHANCED

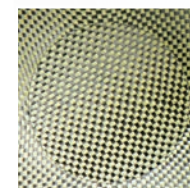

Series Four woofers are constructed with glass fiber for minimal distortion.

Series Four tweeters are made from aluminum for brighter sound.

SERIES SIX

PREMIUM

Series Six woofers are constructed of Kevlar® and carbon fiber to handle the heaviest loads.

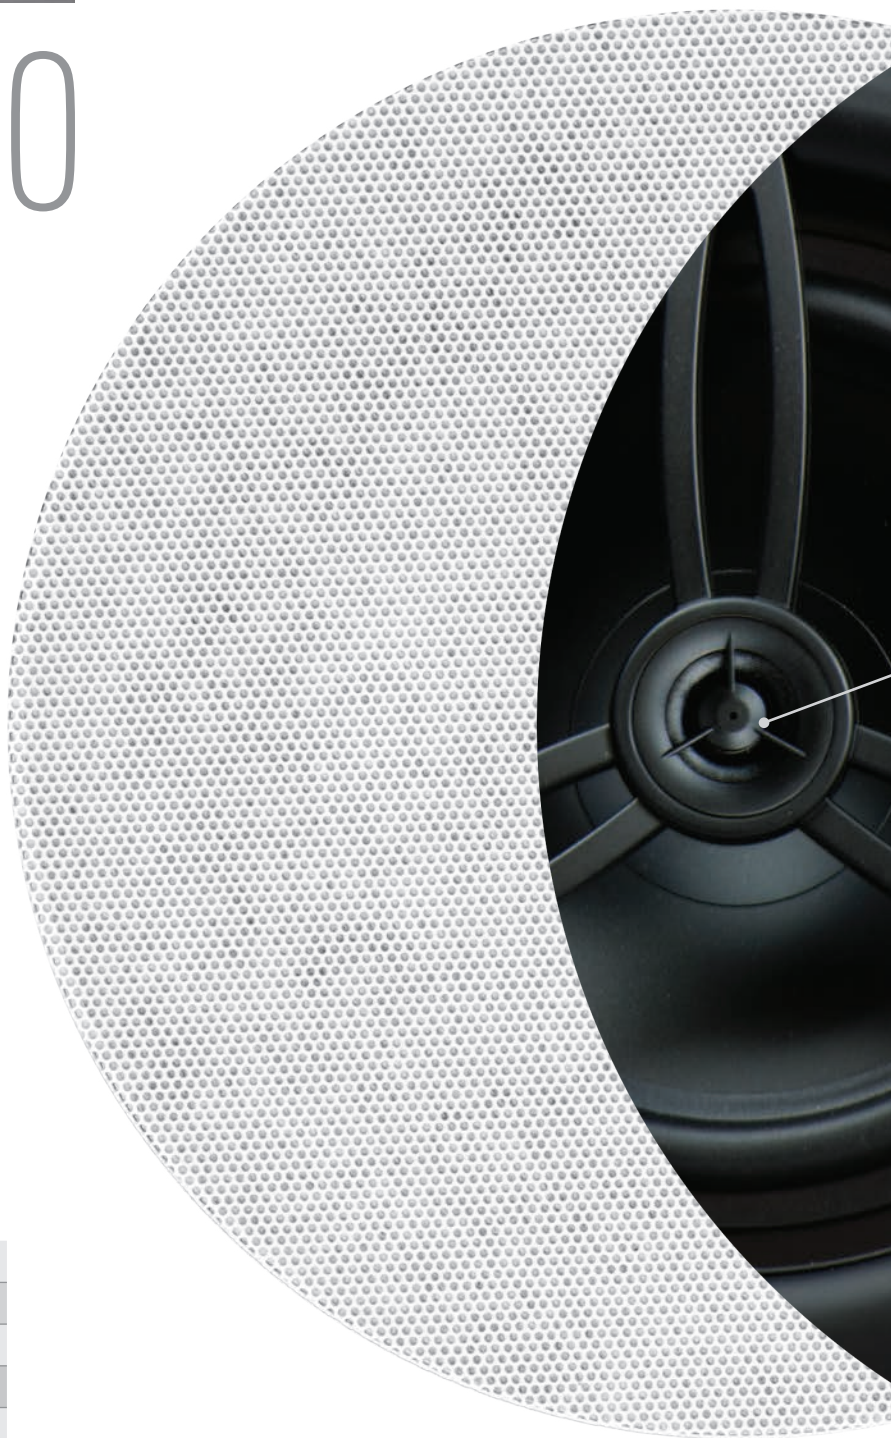

Series Six tweeters are made from titanium for ultimate performance.

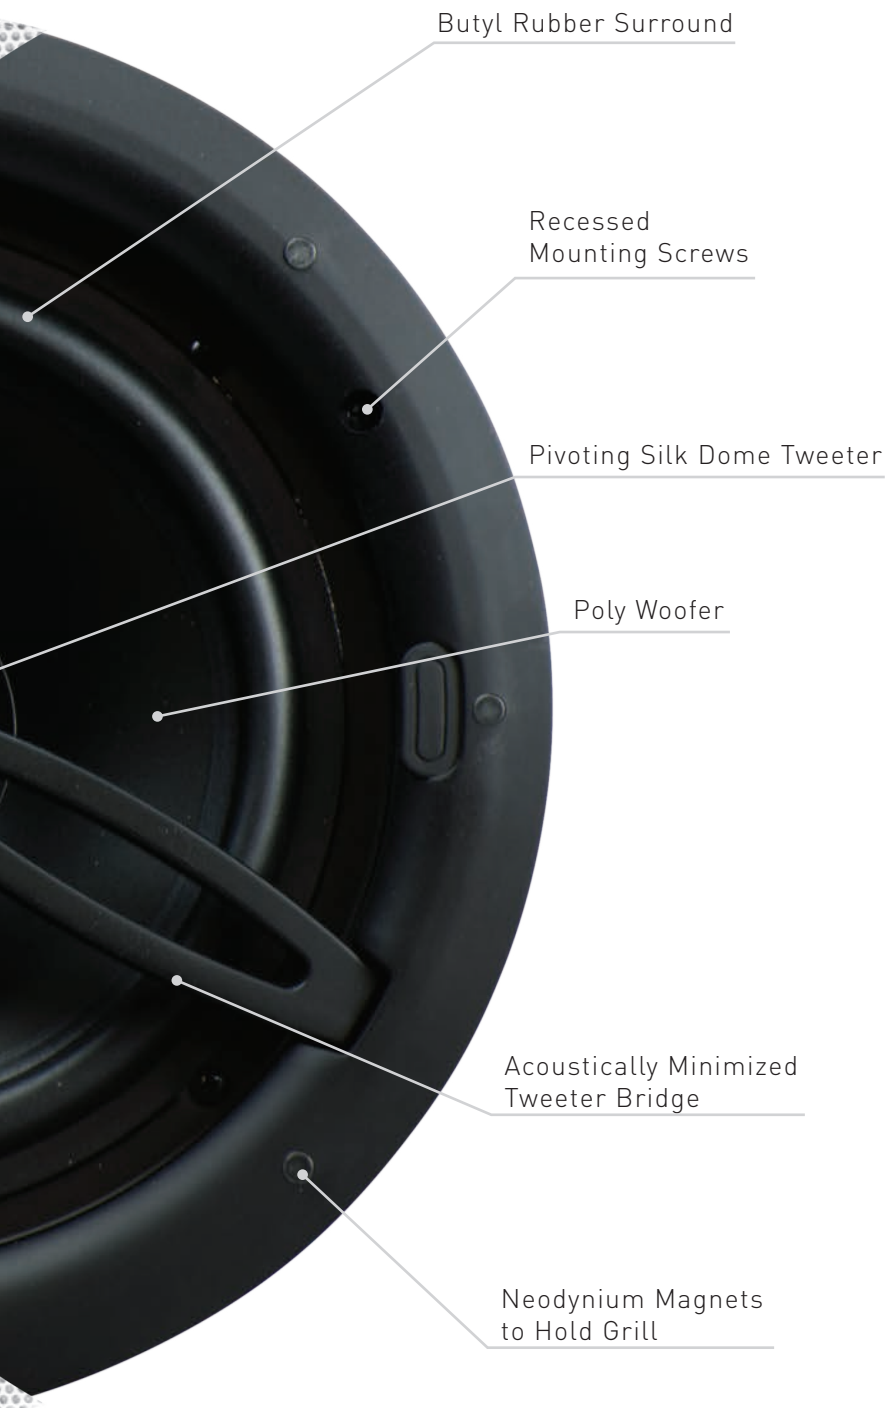

SERIE TWO

The Series Two line of speakers is the ideal choice for those spaces where balanced, moderate sound levels are desired. Choose it for budget-conscious applications and whole-house audio systems. Your clients will be pleasantly surprised by the smooth, natural sound generated from the silk dome tweeters and polypropylene woofers.

Specifications

Power Handling	100w peak / 50w RMS
Efficiency	86dB
Resistance	8 ohm
Tweeter Construction	silk, pivoting

Impeccable sound quality to satisfy even the most discriminating audiophile.

Let's face it. The sound quality your clients desire in their laundry room is much different than they need or demand in their living spaces. That's why we offer three levels of sound quality.

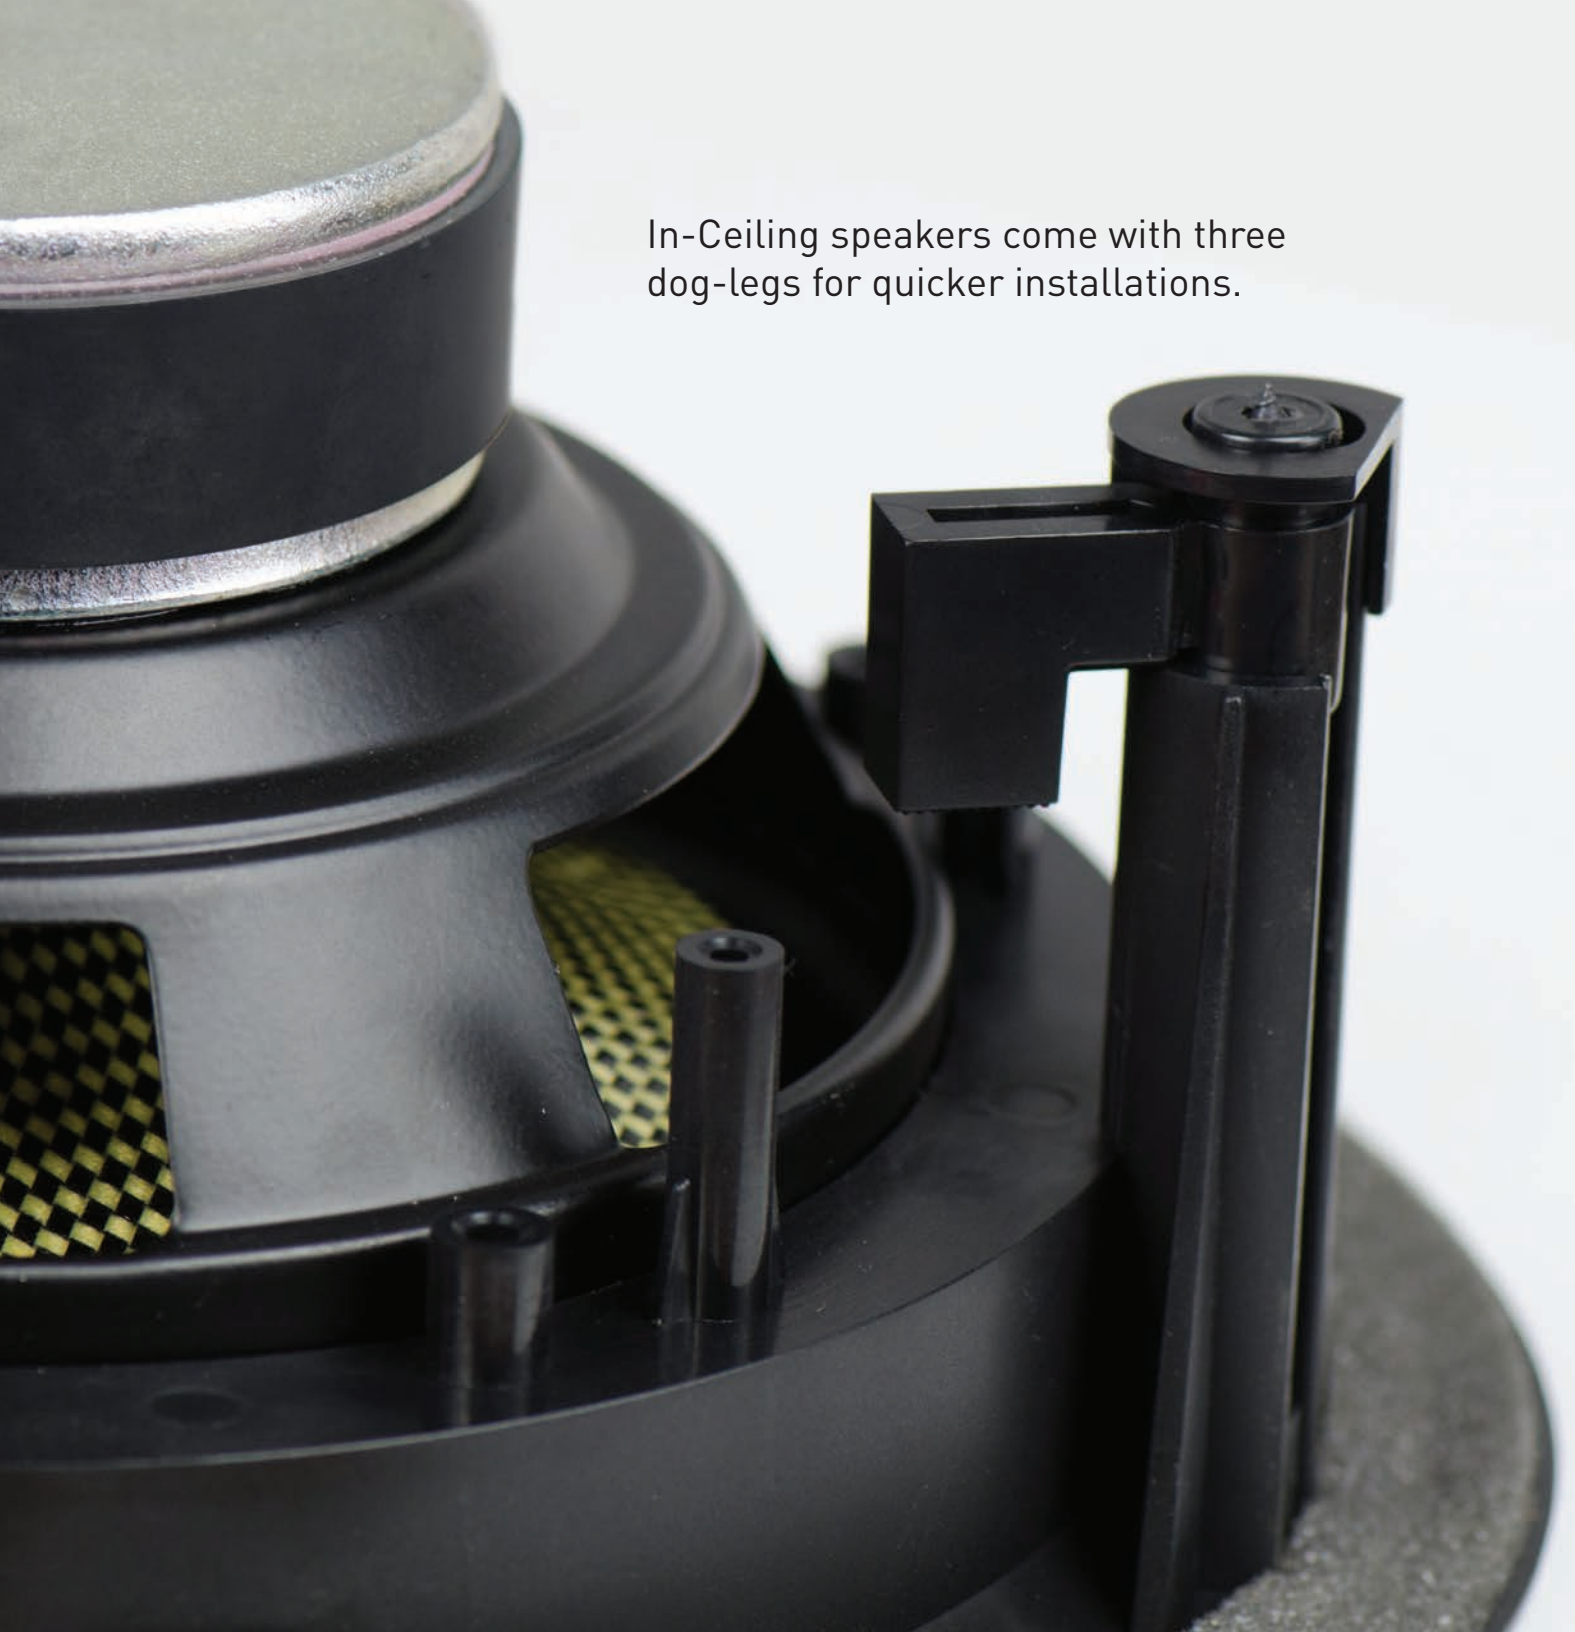

With options that make sense for you, each Series lets you design the best listening experience for each room. Choose from six and a half- or eight-inch speakers. Select straight-on or angled models designed with a 15-degree baffle that directs the sound with precision toward the seated positions of the listener. And, install them where it makes most sense -- in ceilings and/or walls.

Our attention to aesthetics makes you look good.

Our speaker's infinity edge makes gaps a thing of the past. The Series Two, Four and Six speakers are designed with no bezel so they virtually disappear into the ceiling or wall. And our all-metal grills, with removable scrim cloths, can be easily painted to seamlessly blend into any space's décor.

In-Ceiling speakers come with three dog-legs for quicker installations.

Recessed screws provide fast, damage-free installation.

High quality construction provides impeccable sound reproduction.

Ease of installation gets you off the job faster.

We understand that the faster you get on and off the job, the more profitable you can be. That's why we've designed our new Nuvo in-ceiling speakers with only three dog-leg clamps and recessed screws for fast, damage-free installation. Taking the smallest details to the extreme, the magnetic grill quickly snaps into place using durable neodymium magnets and each speaker's tweeter bridge doubles as a handle to make installation even easier.

When it comes to audio, there's no tougher critic than us.

A passion for impeccable sound. It's what compels our team of musicians and audio enthusiasts on their quest for perfection. We're dedicated to bringing you the richest, most evenly distributed sound quality – all because we believe that stunning sound can transform a home – and those in it.
